

Technology Integration

OXYGEN
FINANCE

Oracle Cloud ERP

Before, connecting Oracle's Cloud ERP to Oxygen's Early Payment Solution needed both development resource and technical know-how beyond the in-house capabilities of many client accounts payable teams.

Working with Oracle, Oxygen Finance built a connector that automatically connects Oracle Cloud ERP with Oxygen's Early Payment Solution, providing scalable and secure data transmission and storage.

The Oxygen Oracle Fusion connector speeds up integration and keeps development time to a minimum because it uses Oracle's preferred integration service. What's more, Oxygen will provide support and updates for the connector, for ongoing peace of mind.

"By leveraging Oracle Integration Cloud and working collaboratively with Oxygen Finance, we've been able to demonstrate an excellent example of innovating for the future in streamlining the experience of Oxygen Finance's own customers. The new standardised cloud solution, reduces delivery time to their customers from months to weeks"

ORACLE

"Oxygen's Fusion connector made it so easy. All the key functionality was there from day one, so we could start testing much sooner than we'd expected. We simply created some purchase order and invoice scenarios, and Oxygen did the rest. It just works."

Essex County Council

"We had moved to Oracle Cloud using Fusion middleware to plug-in our existing systems and were concerned about the cost and development resource for adding Oxygen's Early Payment Solution into the mix. We needn't have worried. Oxygen's Fusion connector actually reduced upfront costs and crucially, had no ongoing charges, giving us a stable and secure solution at a competitive price. We also received excellent support from Oxygen and Oracle to put this in place, minimising the call on internal resources."

Lloyd Haynes, Deputy Head of Finance - Corporate

"We have now moved from an on-premise Oracle installation to Oracle Fusion Cloud. Based on previous experience, we thought using Oxygen's Oracle Fusion Connector would mean a lot of extra implementation work. In the end, the installation was far easier than we had feared, and was completed in days, not months."

David Caldwell, Principal Accountant - Financial Information Systems

"Technology integration is crucial to the success of our Oxygen Early Payment products. Having an 'out of the box' solution built with Oracle for our clients is a big step forward which simplifies initial integrations, removes upgrade risks and also gives full functionality on day one."

Rob Parker, Chief Technology Officer - Oxygen Finance
